

TECHNICAL SPECIFICATION

Resin Tiles

The **RESIN TILES** top (usually manufactured in thickness of 5cm) is of a composite nature, which involves an exclusive process developed by ALMI. It combines polyester resin, fiberglass, mineral filler, high resolution photograph, and polyurethane coating; the end product offers a very pleasing aesthetic which can match any requirement in terms of design, the top part being made of reinforced polyester resin is very strong, sturdy, and waterproof;

The sandwich is totally insensitive to stains and aggressive chemicals, high temperature; in the kitchen, it takes the heat of very hot pots, as well as oil, which does not leave permanent mark, and can be cleaned off with a sponge.

Being scratch resistant it will perfectly suit heavy use (hospitality in particular).

The finishing coat in polyurethane offers different possibilities of tone from mat, satin to gloss. The rendering is smooth skin like; the concrete makes itself soft, silky and very sensual.

It is fit for indoor or semi-outdoor (covered patio) use.

In case of semi-outdoor use, a suitable resistance to U.V. will be achieved by the application of Acrylique Polyurethane Lacquer.

For indoor use, Alkyde Polyurethane Lacquer is the prime choice.
